Blockchain proposes a clear and immediate decentralisation of data; also, the technology's code is its law. Both these features make this technology hard, if not impossible, to regulate by a central body.

Blockchain: Regulation and the Law 2019 | ICLG

Blockchain technology offers a decentralized consensus mechanism using networked servers that facilitate peer-to-peer transactions without the need for a centralized authority to maintain the information generated by the transactions. Each transaction is validated and combined in a group of validated transactions, to create a new "block" in an existing chain of transactions, hence the name "blockchain."
