The Composite User Interface Application Block (CAB) is about creating maintainable applications that look and feel professional and use modern technologies. Naturally, all this should be available through a reduced development effort. CAB is part of a larger framework called the Smart Client Software Factory, or SCSF.

Composite Ui Application Block Documentation
The Composite UI Application Block (CAB) framework
is intended for large WinForms-based applications.
The three major goals of CAB design are: Modularity -
you can implement business logic, visual SmartParts,
infrastructure components, presenter or controller
components, and any other objects the application
requires, in separate modules.

Comments (14) | Share Next important part of Composite UI, if not the most significant, is the WorkItem. According to documentation it "a run-time container for components that are working together to fulfill a use case.

Understanding Composite UI Application Block, Part III
I spent last two days trying to learn the Composite UI Application Block (CAB) recently published by Microsoft's patterns&practices group. This application block provides practices and components to build complex smart client user interfaces. I've been working on similar frameworks in the past but I always wasn't quite happy of my design.

Understanding Composite UI Application Block
The Composite UI Application Block provides proven practices to build complex smart client user interfaces based on well known design patterns such as the Composite Pattern.
